

FOR IMMEDIATE RELEASE

Fugro Selects Syntex IMPACT ERM® Suite as its Enterprise-wide Risk Management Solution

Houston, Texas (August 18, 2009) - Syntex Management Systems, Inc., world leader of Enterprise-Wide Risk Management software announced today that Fugro N.V. ("Fugro") has selected IMPACT ERM® Suite as its fully-integrated, enterprise-wide, electronic incident, investigation, and action item management solution. IMPACT provides Fugro with a highly configurable solution, fits their decentralized organizational structure, yet still establishes a common platform for all of their operational risk domains. The IMPACT implementation methodology is streamlined to provide an "out-of-the-box" solution which saves Fugro both valuable time and resources.

Global industry leaders deploy IMPACT ERM® Suite worldwide to reduce losses and improve performance by enabling in-depth analysis of key operational metrics and integrating management system processes at the site, company and enterprise levels. Syntex continues to raise the bar in facilitating collaboration through its software suite, empowering employees and contractors, from the front office to field operations to easily and efficiently report incidents and manage action items. "The off-the-shelf readiness of IMPACT for implementation, and the continuous focus on reporting was a key criteria for Fugro to select Syntex", said Fugro representative. The Fugro Health, Safety and Environment Core team will use IMPACT ERM® to improve HSE performance by using the three key functions of the software: tracking, resolving and reporting risk exposures.

About Fugro

Founded in 1962, Fugro is a Netherlands-based company that collects, processes, interprets and advises on data related to the earth's surface, the sea bed, and the soil and rocks beneath. Fugro's global activities are carried out on-shore, offshore, and from the air, and serve a variety of industries including the oil and gas industry, the mining industry, and the construction industry. The company comprises three divisions: Geotechnical Services, Survey Services, and Geosciences Services. The Geotechnical division investigates the physical characteristics of the soil and materials. The Survey service offers mapping and support services for construction projects, and the Geosciences service gathers and interprets geophysical and geological data on oil, gas, mineral, and water resources.
